

List of Figures

Figure 6.1	Initial conceptual model of the PTL system	412
Figure 6.2	Refined conceptual model of the PTL system	417
Figure 6.3	Iconic representation of the contemporary form of SSM	427
Figure 6.4	SSM modeling entails thinking in layers defined by the analyst	436
Figure 6.5	A logical procedure for building activity models	439
Figure 6.6	The five activities flowing from SSM's seven principles	483
Figure 6.7	Classic seven stages of SSM	506
Figure 6.8	Two-stream enquiry model of SSM	509
Figure 6.9	The process model for ISD in <i>REALSpace</i>	511
Figure 6.10	Fundamental logic of SSM-based IS	514
Figure 6.11	A concept of information system based on HAS	515
Figure 6.12	A concept of an organization	523
Figure 6.13	An individual process model of the active human agent in the world ...	524
Figure 6.14	A social process model of the active human agents in the world	525
Figure 6.15	The links between data, capta, information and knowledge	526
Figure 6.16	The process of organization meanings (POM) model	526
Figure 6.17	The elements whose interactions enact the processes of the POM model	531
Figure 6.18	The COAT model	532
Figure 6.19	Elements relevant to any piece of research	538
Figure 6.20	The cycle of hypothesis-testing research in natural science	539
Figure 6.21	The cycle of action research in human situations	539
Figure 6.22	The general structure of an appreciative system	544
Figure 6.23	The process of appreciation	545
Figure 6.24	Appreciation leading to action	546
Figure 6.25	The model of an appreciative system	548
Figure 6.26	The dynamics of an appreciative system	548
Figure 6.27	The SSM cycle of learning for action	558
Figure 6.28	The LUMAS model: Learning for a user by a methodology-informed approach to a problem situation	564
Figure 6.29	The process of action research for SSM	567
Figure 6.30	The basic toolset of SSM	567
Figure 8.1	Co-evolutionary software development	720
Figure 8.2	Diagrammatic representation of UCD	787
